

NEW FEATURE

ORWAK MULTI 9020S SAFETY BRAKE

NOW LAUNCHING A BRAND NEW SAFETY FEATURE

From March 1, 2017, we equip the classic Orwak multi-chamber baler 9020 with a new safety brake as a standard feature! The operator needs to push the buttons on the handles and have a steady two-hand grip when sliding the top unit sideways. Releasing a button, brakes the press head and makes it harder to move. The new feature improves safety at work and is implemented to meet high customer demands and to comply with local regulations for safe equipment. It is also a first important step to meet the standard EN 16500.
