

MEET ORWAK AT THE INTERNATIONAL SHIPPING TRADE SHOW POSIDONIA IN ATHENS

Orwak exhibits at the global shipping trade show Posidonia on June 6-10, 2016 in Athens, Greece. Every two years it is the largest gathering in the shipping calendar and attracts professionals from the shipping industry worldwide.

To put valuable space to optimal use is one of the top priorities aboard ships and in an offshore environment. Another challenge at sea is to reduce high waste disposal costs. Effective waste handling is a key factor here and with help of Orwak's sorting and compaction solutions, the waste handling can be turned into a stream-lined process to save space, time and costs. At the same time it ensures a high standard of hygiene aboard the ship or on the offshore rig. On display in the Orwak booth at Posidonia there will be a range of machines ideal for the conditions aboard ships and for offshore applications:

COMPACT 3115: a small front-loaded baler designed for compaction of plastic and cardboard. The cross-binding function gives a tight grip of the bale and is helpful for compaction of soft plastic or small pieces of material.

FLEX 5030: Our classic in-bag compactor for hygienic compaction of mixed waste in bags. It is a sturdy and versatile machine with a small footprint and a durable finish. It is also available with telescopic cylinder for extra low installation height in confined spaces and options such as halogen free cables, lockable handle and skid mountings to adapt the unit to the demanding conditions aboard.

TOM: a new compaction system for canteens aboard ships or public areas like lounges, cafeterias, food courts aboard ferries and cruise liners. Holding up to seven times more waste than a traditional waste bin and featuring hands-free operation, TOM keeps the environment tidy and hygienic. TOM saves time, space and energy and all of that saves money in your business!

See you in Athens! Visit us at booth 1.221 at Posidonia!
