

SUCCESS STORY

LAKE WÖRTHERSEE

AUSTRIA

COST SAVINGS IN PEAK SEASON THANKS TO STREAM-LINED WASTE MANAGEMENT

It is a top priority for any establishment to look clean and attractive to the guests and effective waste handling is a key factor here. With the help of compaction solutions, waste management can be turned into a stream-lined process to save space, time and costs for any hotel or restaurant.

WHETHER IT IS A CITY CENTER ESTABLISHMENT OR A SEA- OR LAKESIDE HOTEL, EFFICIENT WASTE MANAGEMENT IS A DAILY CHALLENGE. Installing balers and waste compactors in vital areas through-out the premises addresses these challenges by reducing waste volume directly on site, improving the operational organization and permanently lowering disposal and logistics costs. At the same time, the compaction equipment creates order, relieves the burden on the staff, contributes to fulfilling the sustainability goals and can even turn recycling into a source of income.

One waste solution, many benefits

Waste quickly accumulates in different locations such as hotel rooms, dining rooms, bars, pool areas, the lobby and the kitchen. With an Orwak solution the waste can be handled on-the-spot; e.g. on each hotel floor or move waste to a central location for compaction. A combination of distributed and centralized solutions is also possible to adapt to the local conditions.

Applications for every type of waste

COMPACT 3110, the smallest baler in the Orwak range, is an ideal solution for confined spaces and medium volumes of cardboard and plastic. It is suitable for packaging waste from daily incoming goods at restaurants and small hotel establishments.

MULTI, the range of Orwak balers with multiple chambers, offers an in-house sorting station for hotels dealing with more volume and handle many different types of waste and recyclables.

For mixed waste from the kitchen and cleaning waste there are other practical applications. The small and sturdy classic in-bag compactor FLEX 5030 offers an economical solution for hygienic residual waste disposal. It compacts waste into durable plastic bags. The compaction ratio is impressive, and it is ideal for kitchens and restaurants with high volumes of non-recyclable waste.

For mixed waste, FLEX 660/1100, is another option where the bags are compacted directly into 660 or 1100-L bins. The waste compactor has a small footprint and fits all standard bin brands. It can also be used in cold environments and is perfect for businesses with limited space and high residual waste volumes.

With an Orwak solution the waste can be handled on-the-spot; e.g. on each hotel floor or move waste to a central location for compaction. A combination of distributed and centralized solutions is also possible to adapt to the local conditions.

Lakeside installations at Wörthersee

For good reasons, Lake Wörthersee in the south of Austria close to the border to Italy and Slovenia is called the Austrian Riviera. The Alps reflecting in the turquoise water, the picturesque town and villages, the pleasant climate, the gourmet restaurants and the lakeside hotels make it a popular holiday destination.

However, waste management is a crucial issue for the hotels and restaurants in the peak season. Goods deliveries result in empty packaging material and cleaning and cooking generate big volumes of residual waste daily, while storage space is scarce and waste collection intervals rarely align with the season. The Orwak distributor Interzero has successfully delivered Orwak compaction solutions to many businesses and two content clients at Lake Wörthersee comment:

Peter Herritsch, an experienced restaurateur and former owner of the AQUA Velden restaurant: "We receive large deliveries of goods 3-5 times a week – drinks, fruit, vegetables, glass jars – with a lot of over-packaging. Our paper baler has helped us enormously in saving space and storage costs. At the same time, waste management is now much more structured, which makes the work easier for the whole team."

Heide Pichler-Herritsch from the Lakeside hotel Das JO in Pörschach also sees clear advantages: "Cleanliness and order are central values for us – including in the waste management area. With a well-thought-out system and modern compactors, we save space and costs. At the same time, employee satisfaction increases because everyone takes responsibility."

**"Orwak compaction solutions
for every business: compact,
efficient and sustainable."**
