COMPACTION SOLUTION FOR BAGGED WASTE IN BINS

## THROW & GO COMPACTION SOLUTION FOR BAGGED WASTE IN BINS

Orwak's in-bin compactors FLEX 660/1100 - launched last year - are highly appreciated for their simplicity, effective compaction and effortless "roll in, roll out" concept. They are ideal for volume reduction of bagged general waste, and we are now happy to introduce the more automated version Throw & Go. To fulfil the safety requirements, the compactor operates in a cage. Just dispose of the bags, push the start button and walk away! Compaction starts and the machine will be ready for another load when you return. That is convenient and means more time for your business.

### THROW & GO

Thanks to the protection provided by the cage, the machine starts compacting the waste at the push of a button. No need for the operator to stay during the compaction process. Safety is our priority and the gates to the cage remain locked when the compactor is at work. The shutter can, on the other hand, stay open to facilitate the next infeed of bags after the compaction.

## VERSATILE AND EFFECTIVE WASTE SOLUTION

Are you facing the challenge of bulky waste bags piling up daily? Do they quickly spill over the top of the bin, occupying way too much storage space and requiring far too frequent waste collections? We are familiar with the challenge and developed the in-bin compactors to deal with it. Our in-bin compactors are simple to use and effectively compact the bagged waste directly in the bin. It is a hygienic waste solution for mixed general waste and thanks to the volume reduction, the compactor saves space, transport and costs.

## SMART AND COMPACT DESIGN

Keeping the value of saving space in mind, the waste compactor and the surrounding cage come with a smart and compact design. A lifting plate protects the bin wheels from being damaged during compaction and the machine is robust and prepared for tough conditions. The lifting plate is galvanized, and a good finish and easy access facilitate daily cleaning.

## YOUR SAFETY IS OUR PRIORITY

Safety and quality are Orwak's hallmarks. The cage fulfils the safety requirements to enable a more automated solution and the in-bin compactors FLEX 660/1100 Throw & Go meet performance level C to keep the operator and other people in the vicinity safe. Furthermore, the low sound emission contributes to a good working environment.

## ADAPTABLE TO THE CONDITIONS ON SITE

To easily adapt to the conditions on site, the start button can be placed on the left- or right-hand side of the cage. For installations in different types of environments, Orwak's in-bin compactors come with multigrade oil as standard to maintain high performance at low temperatures.

Experience the new compaction solution for bagged waste and benefit from the advantages it provides; more productive use of time, storage space and money!
